Best Egpu For Mac

MacOS just facilitates AMD GPUs, like the AMD Radéon RX Vega 64. 4 EGPUs require a Thunderbolt 3 connection to function with Apple computers, meaning just Thunderbolt 3-allowed Macs are eligible.. Apple formally folded out eGPU support in macOS with the release of macOS 10 13.. An eGPU will be primarily created to enable smaller notebook computer systems to benefit from the strength of a full-sized graphics cards via a higher speed bandwidth link.
